IO Expansion Shield for Arduino V7
SKU:DFR0265

Introduction

The new IO Expansion Shield V7 has arrived, from the best selling family of IO expansion shield for Arduino. For the past few years these expansion shields have been aiding thousands of makers to create, to expand, to share their sparkles of idea and ingenuity, and now comes the young V7.

The new IO Expansion Shield V7 not only heritages the advantages, but also enjoys numerous new features:

- Compatible with the new Arduino Due
- 3.3V/5V operating voltage select
- Switch for wireless communication & programme
- More Easily recognizable interfaces
- Colorful header for illustrating digital or analog pins
- Immersion gold surface

Specification

- Compatible with Arduino UNO, Mega, DUE...
- 3.3V voltage output interface
- I2C interface
- Support Xbee (Xbee pro)
- Support Bluetooth

Contents

- 1 Introduction
- 2 Specification
- 3 Pin out
  - 3.1 Introduction for Digital pins
- 4 Documents
- 5 Version history
- Support APC220
- Support SD card read/write

**Pin out**
